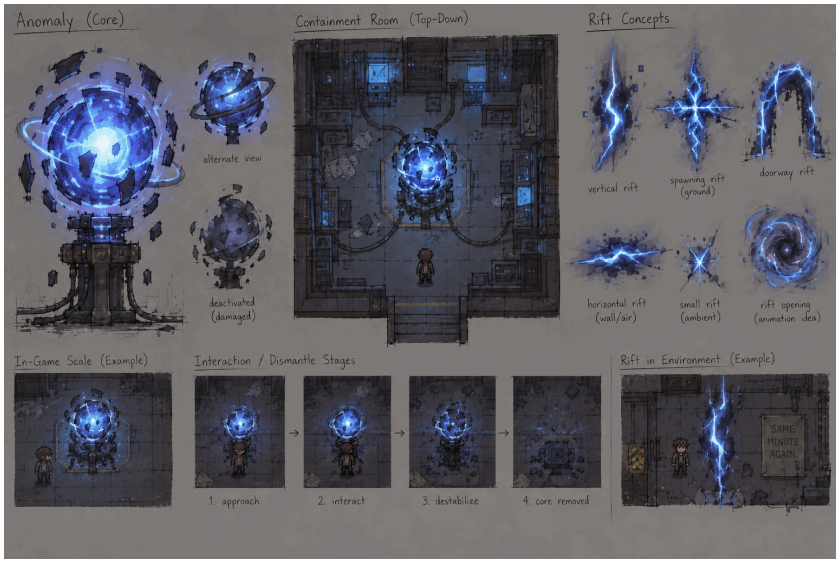
All of the following prompts were entered into ChatGPT

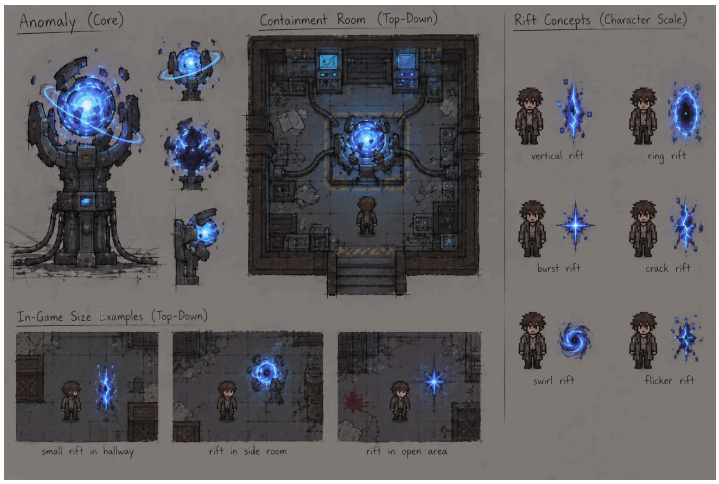
Give me just the watch as an image. Give me just the image of the front and side of the watch with no text no other details

---

Ok now give me an anomaly type of object that is contained in a room for the character to dismantle. it looks similar to the anomaly that the character interacts with in titanfall 2 where its a blue orb that is causing the time issues in the first place. also give me some rift looking concepts just like in plants vs zombies that is a blue lightning bolt.



- Ok make the rifts smaller and about the height of the character



Based off these pictures can you give me some example game cover that coveys the visual feel of the game. The image should generate excitement and convey the energy of playing the game

---

I created this character design using Procreate and pixilart.com

ok i want you to make a standing animation for this character. keep it pixelated just like the concept art and make it about 5 frames. make each frame width and height easily implementable into gamemaker and tell me what the fram height and width is so i can insert it right into GameMaker

ok now do exactly what you just did(5 frames, same size picture), but have the animation of the charcter running to the right

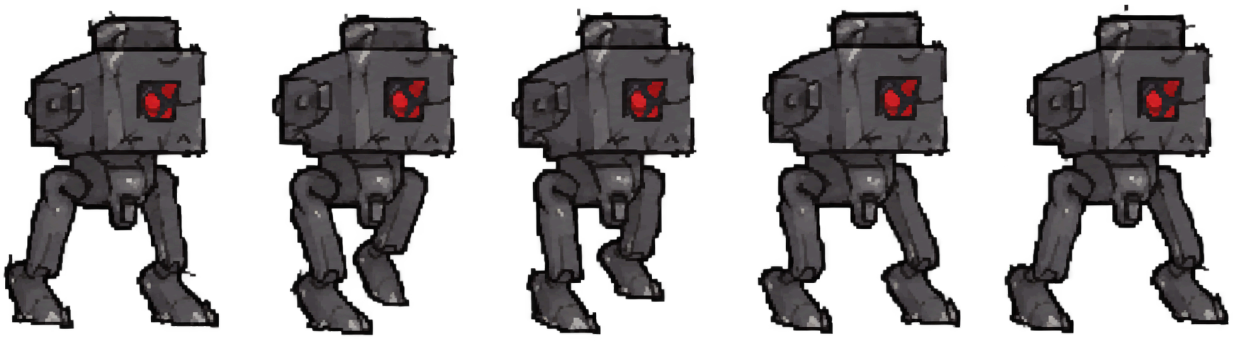
ok now thats perfect. now i want you to do the EXACT SAME THING but have the character running away with its back facing us

based off the already originating character animations i attached i want you to create a animation of the character running towards the camera.ensure that the art style stays the EXACT same, make sure the png is transparent and keep everything at the exact same pixel size and everything. make it 5 frames

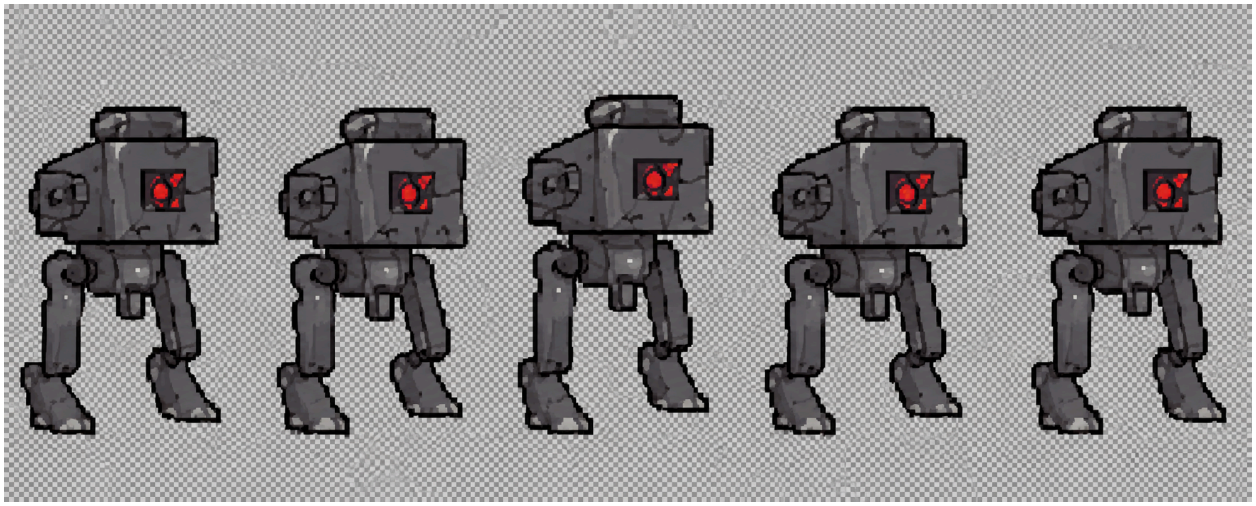
---

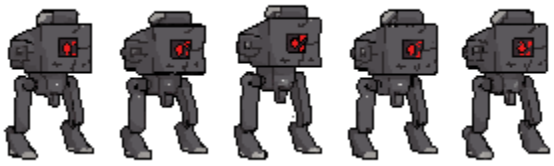
I created this patrol bot using Procreate

ok for this patrol bot i need you to make a 5 frame animation of it walking

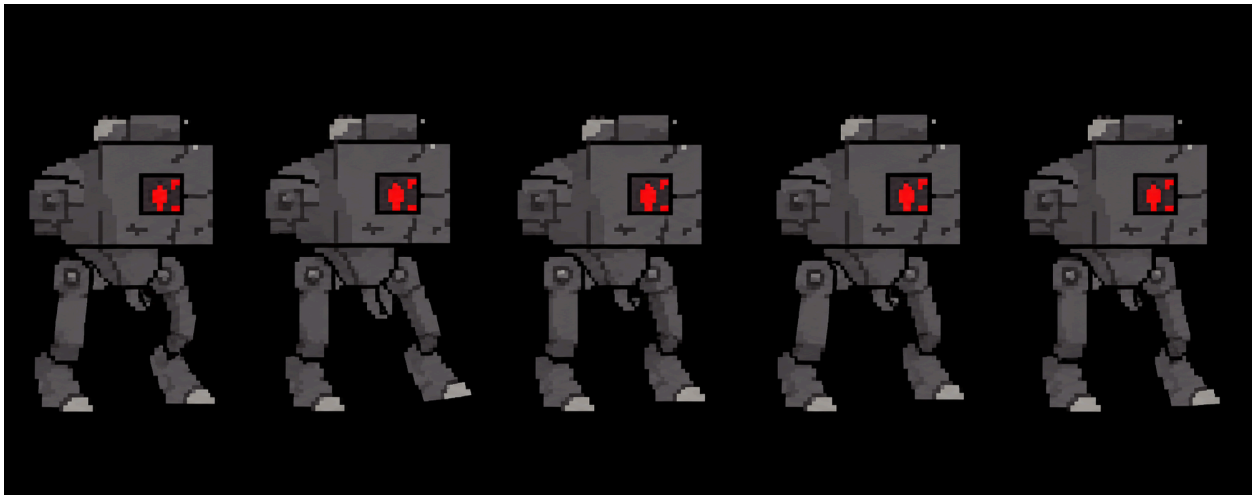


Ok now i need you to make a 5 frame animation of it being idle. make the pixel size 7 with each bot frame being the same size of 400x800. make th ebot look like its breathing or have very slight movement when idle, nothing too crazy tho

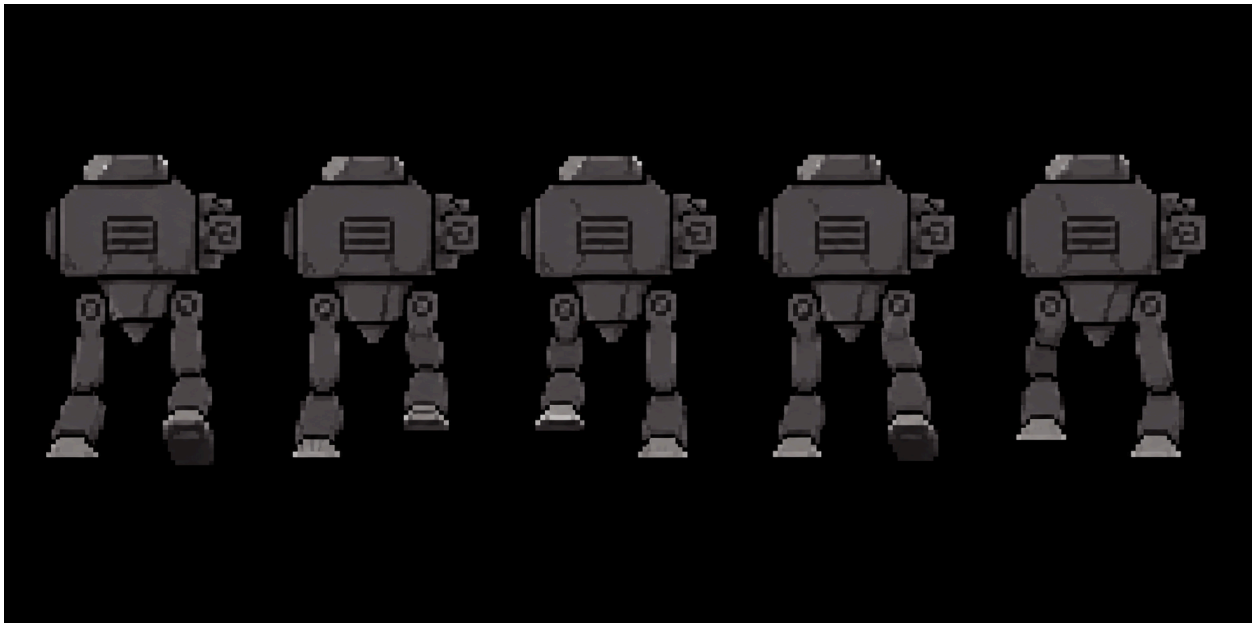




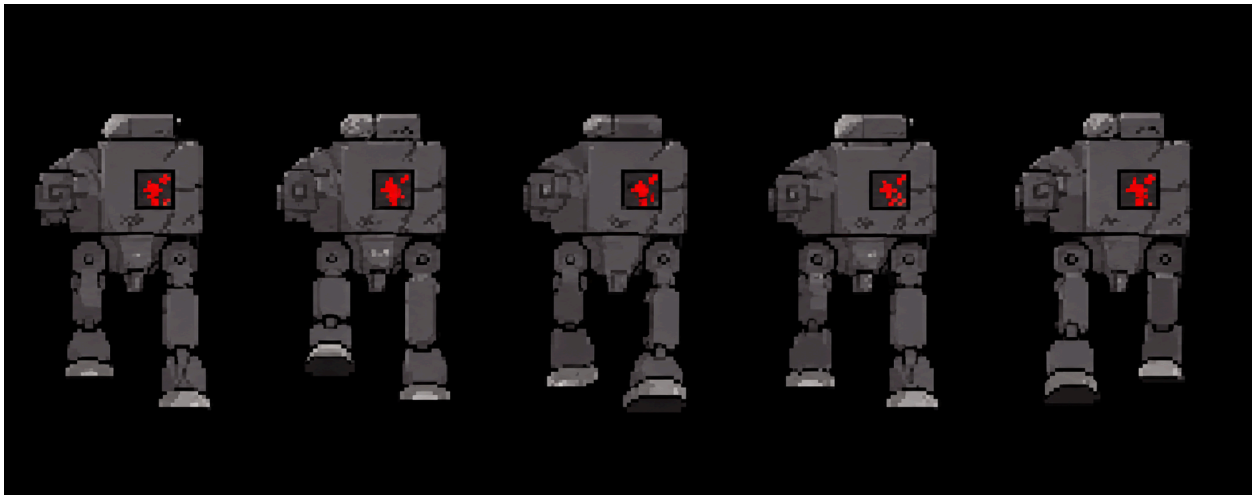
ok i need you to make a full walking animation of this robot walking to the right. make it the same amount of frames and size and also ensure that the graphics look the exact same as the photo i posted here.



ok now i want you to make a walking png that has the robot walking away from the camera. same art style, same pixel size, just make it walk away from the cam

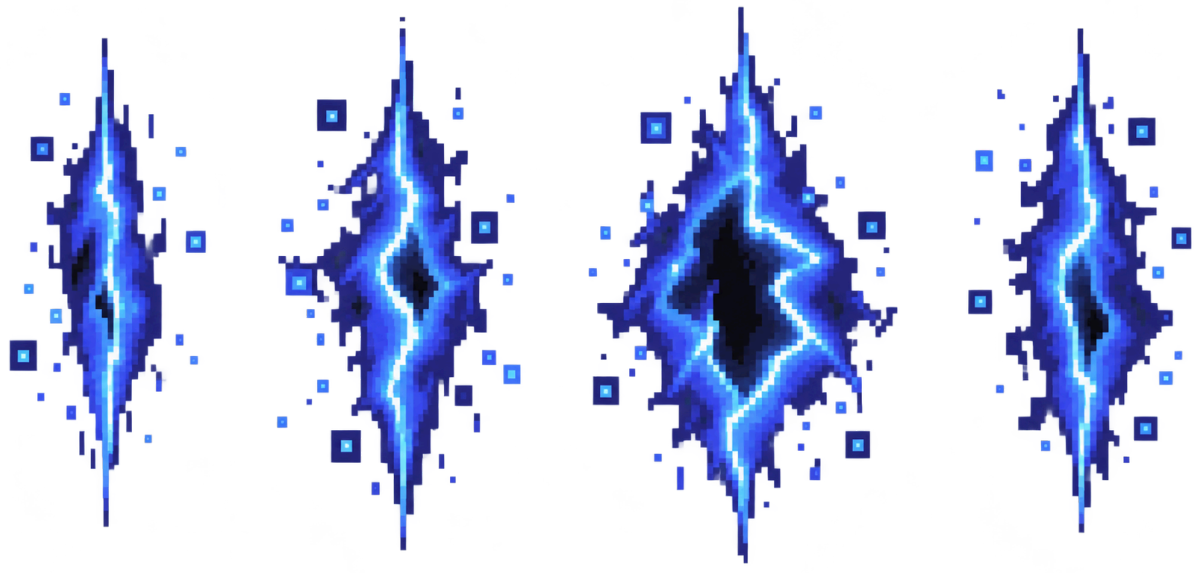


ok now make a animation where the bot is walking towards then camera



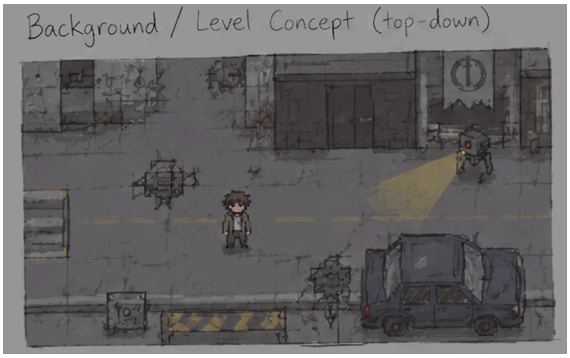
---

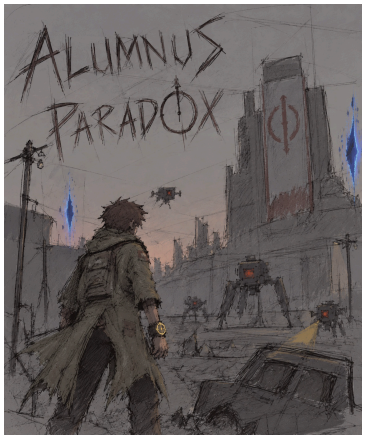
ok now based off the posted reference picture i want you to make it animated. make it about 4 frames and make it look pixelated

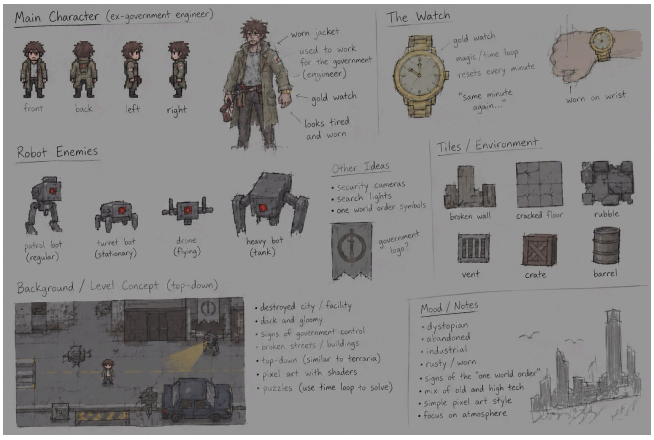


Nice city

We were once the best city for robotics development. Everything we had far more advanced than anything you could find



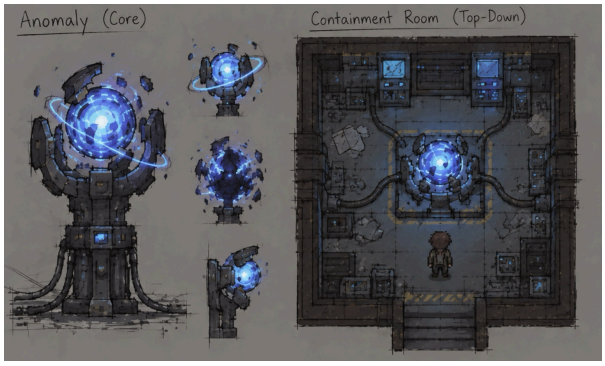




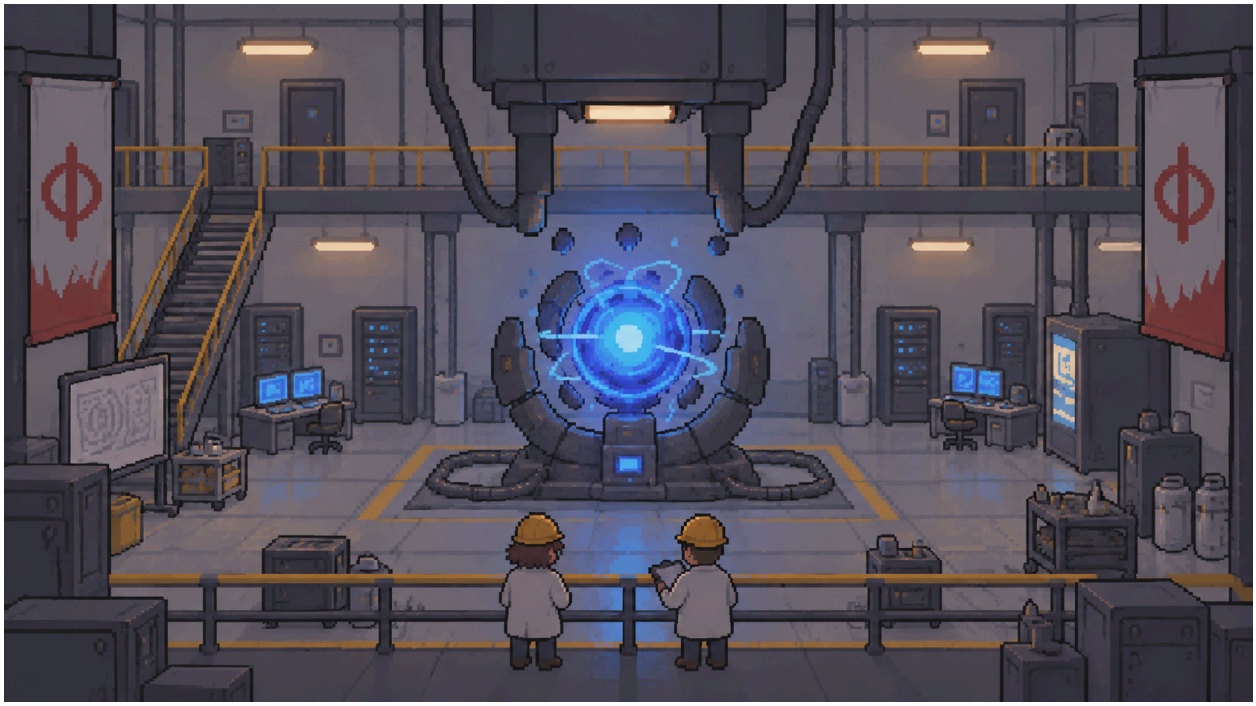
ok now im starting to make the intro slides for the game. i need you to make a pixelated image of a city skyline for the game based off of the pictures that i sent you i also sent the slide with the dialogue that will be with it. Make sure that it doesn't look too detailed

Paradox device lab

We used our knowledge to even explore time, we created the paradox device. An amazing but costly experiment in altering time.

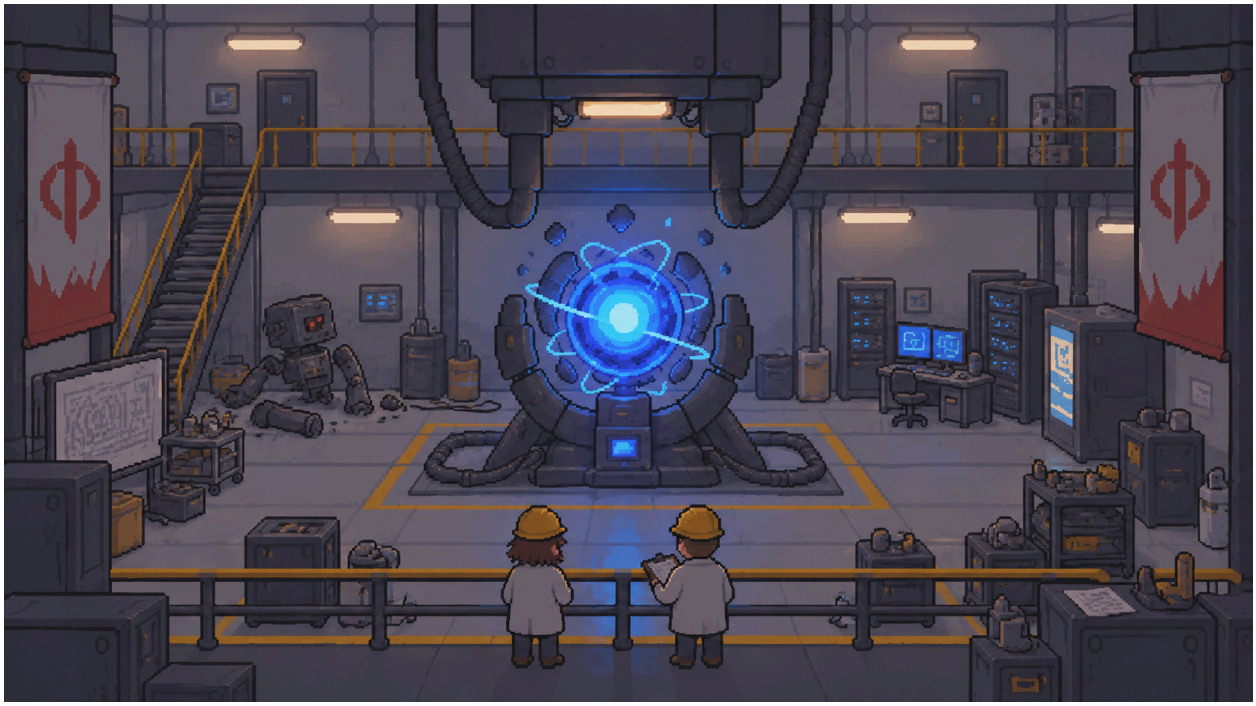


ok now for the next scene i want the main character and another character to be wearing a lab coat and a hard hat looking at the paradox device. make the room look fresh and new but also to be full of engineered stuff



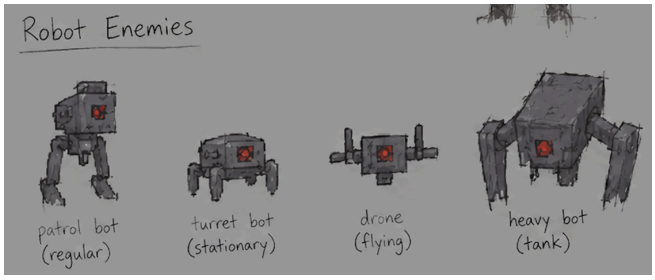
---

ok i want you to add a disassembled patrol bot in the backgroud

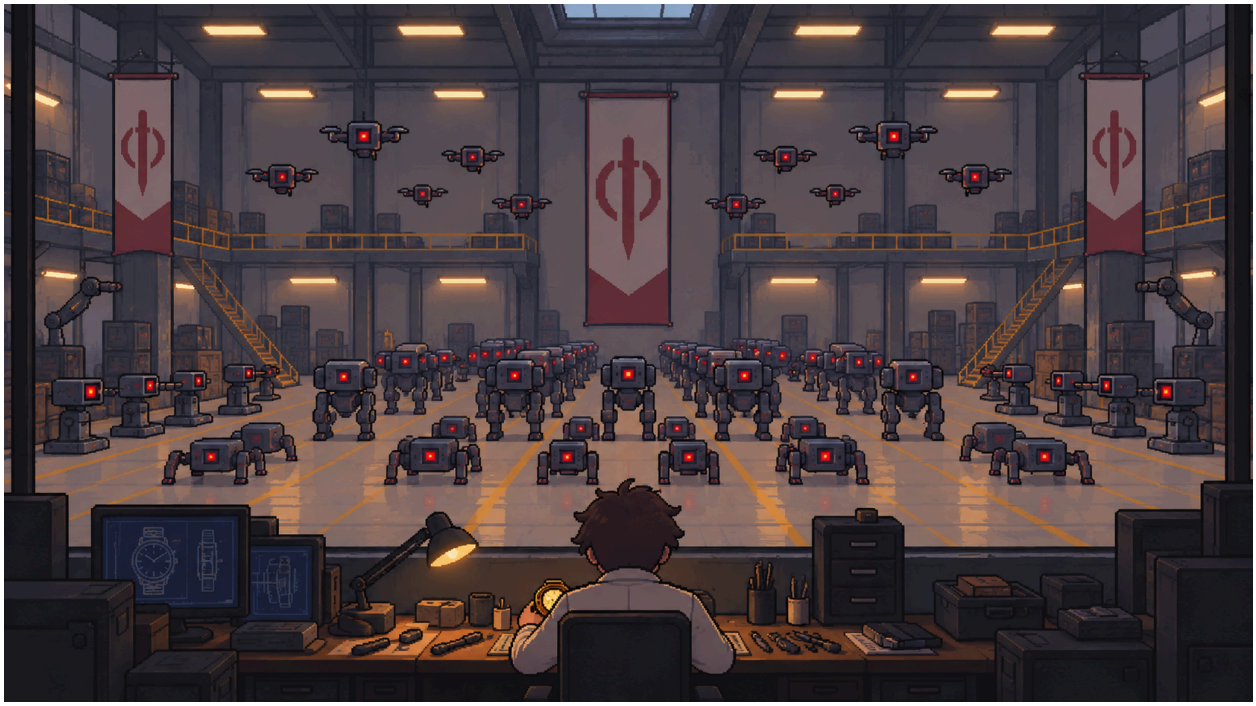


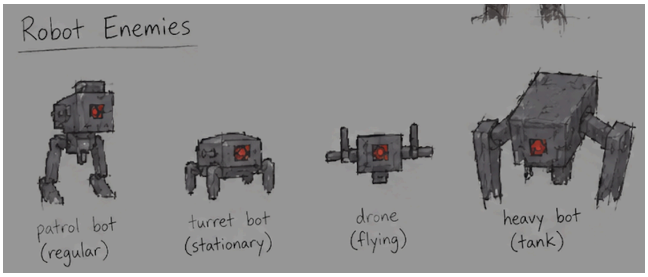
Robot army

I never would have thought that those two things would become our downfall. The robots we relayed on so much took over and did something they never should have done with our most valuable and experimental creation.



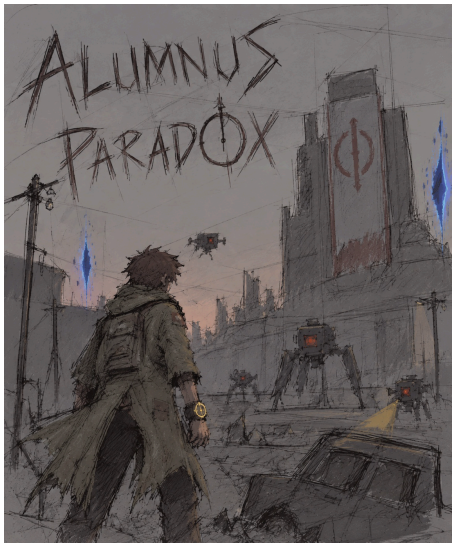
ok now i want you to make a image of all the robots lined up looking at the player. setting is a polished warehouse with patrol bots and turrets on thr ground and different types of drones in the air. and i want the player to be looking at this on the other side of the building sitting at a desk like he was working on a gold watch.





ok now do an image of this city in ruins. building rubbish, patrol bots walking around, drones flying around, smoke in the distance, etc. and can you make it look more simple and pixelated, and less detailed

---



ALUMNUS
PARADOX

ok i want you to make a scene of the main character facing some robots like the sketch posted. make the picture pixelated and have it be simple like the last image i had u generate
